

healthcare solutions

a trusted partner

Global Furniture Group offers a broad range of furniture products and solutions designed for the healthcare, workplace, hospitality, and education markets. Within a healthcare environment, we understand the importance our products play in creating spaces which support caregivers, patients and their families. Our goal is to elevate every experience by providing comfortable, flexible and engaging furnishings for every space.

community space

More than just the front lobby. Community space plays a part in shaping the experience in healthcare environment. These spaces are designed to foster connection and offer choices that should support families or small groups to gather with varying levels of privacy. These areas are accessible to all and should be comfortable and able to accommodate long or short-term waiting.

patient space

Patient spaces serve multiple functions in today's healthcare environment. Not only a space for providing the safe delivery of clinical services, but also where consultation, learning and sharing happens. These spaces should be designed to empower patients while supporting their needs and providing comfort, dignity and care.

caregiver space

Caregivers shift constantly from direct patient care to administrative tasks and information sharing. Concentrated work, peer collaboration and consultations with families and patients work best when space matches the activity. Caregivers need quiet areas, private spaces and open, connected places, allowing them to engage with not only patients, but coworkers as well.

reception + registration

The healthcare experience starts at registration and waiting areas. Welcoming visitors into a safe, comfortable environment reduces stress and assists in building trust.
